## Temple Education Services

NEMA Course Descriptions & Dates, 2011-2012

### TES-201 Basic NEMA Traffic Control & Cabinet Troubleshooting Workshop

September 13-15 & October 4-6, 2011

The TES-201 Workshop is designed for personnel and supervisors maintaining NEMA traffic controller cabinets. Most students attend for an introductory course or beginners' session in controller programming and cabinet maintenance. It is recommended that each individual enrolling have at least 6 months in service, as well as a general knowledge of the equipment and traffic industry terminology. Topics of discussion include classroom lecture (covering Basic Operational Theory & Use), preventive maintenance, controller cabinet troubleshooting techniques, and basic NEMA Controller programming/set-up. A question and answer session follows.

### TES-202 Enhanced NEMA Controller Programming Workshop

November 15-17 & December 6-8, 2011

The TES-202 Enhanced NEMA Controller Workshop is designed for personnel and/or supervisors who will be programming and maintaining NEMA traffic Signal Controllers. Topics of discussion include classroom lecture, hands-on work with the NEMA Controller, and screen-by-screen instruction on the programming of intermediate functions. It is recommended that each individual enrolling have at least 6 to 12 months in service, a general knowledge of the equipment and traffic industry terminology, as well as basic NEMA Controller programming skills. A question and answer session follows.

### TES-203 Advanced Controller Programming Workshop

January 10-12 & February 7-9, 2012

The TES-203 Advanced NEMA Controller Programming Workshop is very difficult, and it is assumed the individual attending this course will already know Basic and Enhanced NEMA Programming. This workshop is intended for more advanced signal technicians and their supervisors. Topics of discussion include in-depth instruction on the advanced features of the EPAC Controller, hands-on work with the NEMA Controller, and screen-by-screen instruction on advanced programming functions. It is recommended that each individual enrolling have at least 12 months in service and ADVANCED KNOWLEDGE of the equipment and traffic industry terminology.
