

Roadway Sensors

LAM [Lens Adjustment Module]

The LAM is a portable setup tool that allows Vantage system installers to adjust the camera sensor lens' focus and focal length (zoom). This lightweight tool facilitates quick and easy Vantage camera sensor positioning and setup. Large rocker switches and "D" handles make it easy to handle and use in any weather condition.

The Vantage LAM is available available in NTSC or PAL format, and can be used with or without the integrated LCD monitor.

Features

- Compact Size
- Lightweight (approx 6 pounds with monitor)
- BNC type video connectors provided
- Tether strap with a quick release buckle is provided to secure the LAM to almost any structure

Junction Box

Features

- 12' Pigtail that can be cut to size for any camera mount.
- Deutsch Connector is assembled and terminated at the factory.
- Weatherproof junction box for terminations.
- Aluminum cord grips for longer reliability.
- Back plate designed to mount on either a round or square camera mount.
- Slots provided in back plate to support banding assembly to the camera mount.
